

Transit

By using only WALLDEPOT's on-net peers, DEPO Transit builds on WALLDEPOT's backbone infrastructure to offer customers a unique opportunity to improve All India connectivity and cut operating costs in a simple connectivity package

Global Transit

WALLDEPOT's Global Transit Service connects your network to WALLDEPOT's IPNetwork enabling it to become part of the Internet. That means you have access to a full Internet routing table through WALLDEPOT's Global Transit service. As well as IPV4, the WALLDEPOT network is also native IPV6 enabled

The Advantages is in the Network

Technology at work for you

Connecting your business to the technology resources you need

Vision :

TO BROADEN THE REACH OF INTERNET USERS WITH QUALITY SERVICE AND TO CREATE 1LAKH JOBS WITHIN 2020

About Us.

With established operations through out west Bengal, we are Making small but definite steps in changing the internet Scene in Whole of India.

Wall depot's fibre optic network serves governments, universities and research agencies. Wall depot also provides ICT services and solutions to international enterprises from a broad range of sectors including aerospace, automotive, finance, pharmaceutical and retail.

These organizations find WALL DEPOT the ideal partner for network outsourcing, infrastructure, bandwidth, internet services, connectivity and hosting or for creating new services

Value From Ground to Cloud

We offer a broad portfolio, ranging from physical network based products (the ground) to virtual network-based services (the cloud)..

The WALL DEPOT network platform with its 600km of lit fibre continuously evolves to meet our customers' demands and underpins our broad service offering. As well as providing unparalleled cross-border connectivity, the network is continuously being expanded into new and emerging markets to meet the growing demands for high capacity, low latency services. This constant network investment ensures the WALL DEPOT teams are synchronized to the cycle of design, build and operate -that is central to WALL DEPOT's outsource services portfolio and WALL DEPOT's position as a carrier.

WALL DEPOT's physical network provides secure connectivity to enable Infrastructure as a Service (IaaS) paving the way for a pay as you grow delivery model..

For our Service Provider customers WALL DEPOT's Unified Transport and Infrastructure portfolio gives us unrivalled capacity and speed to market.

For Enterprise customers, our Unified ICT approach combines Unified Connectivity, Unified Communications and Unified Computing to put the power of the cloud in our customers' hands.

Our integrated next generation network and data centre facilities are monitored and managed by our Network Operations Centre (NOC) in Kol kata. This facility is home to our network and Customer Service teams who support all of our services on a 24 x 7 basis.

Products we offer :

Lite Fibre

We provides complete design, build and operate package for lit fibre networks. From sourcing fibre to equipment vendor selection, network design and deployment, through to on-going operational maintenance and management, We rapidly reduces our customers' time to market and operational costs. This service gives our customers the ability to operate the products and strategies they want, safe in the knowledge that their network is supported by the team that built and manage advanced network asset.

24 X 7 CUSTOMER CARE

PRODUCT WE OFFER

- Lite Fibre
- Optical Private Network
- Virtual PoP
- Channel VPN
- Managed Hosting and co—location
- Bandwidth Services
- Ethernet Services
- Dark Fibre
- Transit
- Global Transit

flexible solutions for your business needs

Wall Depot provides a total end to end solution

OPN (Optical Private Network)

Our Optical Private Network provides carriers with high capacity wavelength switch partitions that are deployed without the need to design, build and operate your own network. This service is usually deployed in units of 100Gb with all associated network costs made proportional to the network size. It means we provide optimal speed to market with minimal capital spend.

VIRTUAL POP

With time to market and cost efficiency as core drivers, WALLDEPOT's VPoP solution is ideal for carriers looking to deploy Points of Presence in new geographies, rapidly and without the administrative overhead of establishing a physical presence. VPoP takes away the majority of the risk and commitment associated with network expansion and allows easy entry into new and emerging markets where revenue streams still may have to be proven.

CHANNEL VPN

WALLDEPOT's MPLS based Channel VPN offering empowers our carrier customers to extend the reach of their MPLS VPN Service offering across the WALLDEPOT network footprint. By combining key end customer benefits of privacy and security with the flexibility of wires only, CPE support and both managed and unmanaged options, the WALLDEPOT Channel VPN package is a powerful extension to a carrier's portfolio.

Managing Hosting and Co-Location

We offers managed turnkey solutions allowing customers to outsource business-critical systems in a secure managed environment. Virtual Hosting allows you to create adaptable, scalable, fully-resilient and secure Data Centres – that you control – without the need to purchase any equipment.

Bandwidth Services

SDH and wavelengths are available across our entire network footprint in 29 states. We enjoys considerable cost and operational advantages by delivering these services on its own infrastructure. We interconnects with numerous local providers at the metro PoPs in order to provide end-to-end services.

Ethernet Services

Ethernet services are available across WALLDEPOT's footprint with connectivity ranging from 2mb to 10Gigabit. In addition to Ethernet Private Line, We also offers Ethernet Virtual Private Line and Ethernet VPN services, either managed or unmanaged. By utilising both Ethernet over SDH and Ethernet over MPLS, WALLDEPOT provides services that meet both price and service-level

Dark Fibre

WALLDEPOT's Dark Fibre Services are designed to put a customer in full control of their network. Dark Fibre provides flexibility of choice over the service platforms that a customer may wish to deploy. Choose to overlay any protocol and be safe in the knowledge that expansion and full control lay firmly in our customers' hands
